COMIC ROX

After-Whatnot Show Checklist

Show date: _____ Stock/export checked at: _____

> **Current limitation — bulk cleanup is not yet verified.** The cleanup files were rejected on the upload page used for additions. Use the manual fallback in step 7 until the correct bulk-edit upload is confirmed accepted.

☐ **1. Update Shopify stock first**
Record all Whatnot sales in Shopify. Reduce quantities correctly; set sold-out variants to **0**. The tool cannot read Whatnot sales directly.

☐ **2. Export Shopify**
Shopify → Products → Export → **All products**. If the download is a ZIP, extract it and use the CSV inside.

☐ **3. Export current TikTok products**
Bulk actions → **Edit products**. Export **Live, Failed/Needs attention, Deactivated and Draft** separately. For each: Select filtered → All information → Generate template. Keep the XLSX files. Note any genuinely empty status.

☐ **4. Load the files into ComicRox TikTok Sync**
Load the Shopify CSV. Before adding each TikTok file, select its correct **export source status**. Tick each “complete / empty” box only when that status is fully accounted for. Click **Compare exports**.

☐ **5. Resolve clear identity matches**
Show → **Check identity manually**. Compare the TikTok listing with the selected Shopify record, including issue, cover and CGC grade/certification where relevant. Confirm only clear matches; leave uncertain ones unresolved. Saved matches are reused.

☐ **6. Review the cleanup list**
Show → **Remove / zero-stock checklist**. Download this checklist CSV for reference. Check these existing TikTok listings should stop selling. Archived/unpublished Shopify products can appear even with positive stock.

☐ **7. Stop the confirmed listings on TikTok**
Current method: find the confirmed listings in TikTok using their product IDs and deactivate them, or set the affected variant stock to 0. Keep a product active if another variant is genuinely available. **The cleanup XLSX requires bulk EDIT, not the new-product upload. Until acceptance is verified, use this manual fallback.**

☐ **8. Verify the cleanup**
Check in TikTok that the affected products are deactivated or have stock 0. Export fresh TikTok files, replace the earlier files in the tool and compare again. Uncertain matches still need separate investigation.

☐ **9. Back up and finish**
Click **Download TikTok Sync backup**. Keep it with the show’s exports and checklist. For a stock clear-down only, **stop here — no additions file is required.**

Adding new stock is separate: review Ready additions, generate the additions workbook, import it through TikTok’s new-product upload and check the result. Record successful Seller SKUs against that run. Never repeat an already successful additions upload.
